PROFILE

Second-year Information and Communications Technology student at Mahidol University, specializing in Digital Science and Technology. Interested in Software Engineering and Quality Assurance, with hands-on experience developing web applications using JavaScript, Python, Java, and SQL. Familiar with database management, software development tools, and fundamental software testing concepts through coursework and practical exercises. Seeking an internship to apply technical knowledge, gain industry experience, and improve problem-solving skills.

SKILL

Technical Skill

- **Programming Languages:** JavaScript · Python · Java
- **Web Development:** HTML · CSS
- **Database:** SQL · MySQL · PostgreSQL · ER Modelling · Supabase
- **Development Tools:** Git · GitHub · Visual Studio Code · Figma

SOFT SKILLS

- Problem-Solving · Analytical Thinking · Teamwork and Collaboration · Adaptability

EDUCATION

Mahidol University 2025 - Present
Faculty of Information and Communication Technology
Bachelor of Science in Digital Science and Technology
GPA 2.92

Sarasas Witaed Thonburi School
English-Chinese Program

PROJECT

Weather App

HTML · CSS · JavaScript · Open-Meteo API | GitHub repository · Live demo

- Built a weather web app showing current conditions and a 7-day forecast, including temperature, feels-like, humidity, wind speed, and chance of rain.
- Implemented city search with autocomplete suggestions, keyboard navigation, location-based weather, and a Celsius/Fahrenheit toggle.
- Handled API requests safely with timeouts and AbortController to prevent race conditions, and saved the last city and unit in localStorage.

Meeting Room Booking

HTML · CSS · JavaScript · Supabase (PostgreSQL, Auth, Realtime) | GitHub repository · Live demo

- Developed a meeting room booking system with real-time room availability and hourly booking schedules.
- Implemented validation to prevent double-booking and restrict bookings for past time slots.
- Integrated Supabase Authentication and Realtime to manage user access and synchronize booking updates.

Expense Tracker

HTML · CSS · JavaScript · Supabase (PostgreSQL, Auth) | GitHub repository · Live demo

- Developed a web application for recording and managing income and expenses by category.
- Created monthly financial summaries and visualized spending through percentage-based charts.
- Added CSV export (UTF-8 BOM for Thai text support) and Supabase Auth (email/password and guest sign-in) to keep each user's data separate.

TEAM PROJECT

CondoFlow – Condominium Management System

React · TypeScript · Vite · Tailwind CSS · Recharts · Local Storage

- Collaborated with a team to develop a web-based system for managing condominium units, tenants, payments, maintenance requests, and parcel information.
- Designed and developed frontend components with a focus on usability and responsive layouts.
- Contributed to the system structure and implemented a Kanban board for tracking maintenance requests.

Starbucks Database System

Database Design · SQL · ER/EER Modelling · Relational Schema · Normalization

- Worked with a team to design a database system for managing beverage orders, inventory, and Starbucks Rewards membership.
- Created ER/EER diagrams and translated the database design into relational schemas.
- Applied database normalization up to Third Normal Form (3NF) and documented database structures and business rules.

ACTIVITIES

Raknong Group 10

Procurement and Venue Support Staff

- Supported procurement and preparation of materials and equipment for activities.
- Assisted with venue preparation and coordination to support smooth event operations.

LANGUAGES

- **Thai:** Native
- **English:** Intermediate
